

Enhanced internal control chemistry starts with **SAP Business One**[®]

SOLVOCHEM, a supplier of chemicals, solvents and plastics worldwide, worked with SkyTech to implement SAP Business One into their operations. Now with all information within the one system, management can access the data they need exactly when required, enhancing workflow efficiency.

Before: Challenges and Opportunities

- Previously, data used to be managed manually across multiple systems, which was time consuming and caused inaccuracies.
- Cashflow and budgeting was difficult to track, especially across multiple countries.
- A new platform was required that could integrate all data onto one streamlined system.

Why SAP Business One and SkyTech

- SAP Business One has a good reputation as one of the best solutions for enhancing internal control.
- SkyTech is a real team player, taking their time to understand SOLVOCHEM's business needs, and ensuring any problems can be dealt with quickly.

After: Value-Driven Results

- Since implementation, all information is now gathered within SAP Business One enhancing overall internal control.
- Cashflow can be monitored accurately.
- Real-time reports can be easily generated.
- Individual customer reports stating average expenditure can be accessed in one click.
- Internal processes have been automated, saving time.

“SAP Business One is **a good internal control system that any company would want**. Together with SkyTech, we work as one company, working to build a strong workflow.”

Zaid Elyan – Finance Control Manager, SOLVOCHEM Limited

Planning cashflow from one unified box

SAP Business One brings all data seamlessly together.
